The GGDC 10-Sector Database gives sector detail to the historical macro data in Maddison (2003) from 1950 onwards. It consists of series for 11 countries in Africa, 11 countries in Asia, 2 countries in the Middle East and North Africa, and 9 in Latin-America. For comparison, we have also added data for the US and several European countries.

It should be stressed that the estimates for the total economy are aggregated across sectors and that, because of adjustments at the sector level, the aggregate results are not fully consistent with the national accounts aggregates (see the sources and methods document). Also note that value added data in this database are expressed in local currencies.
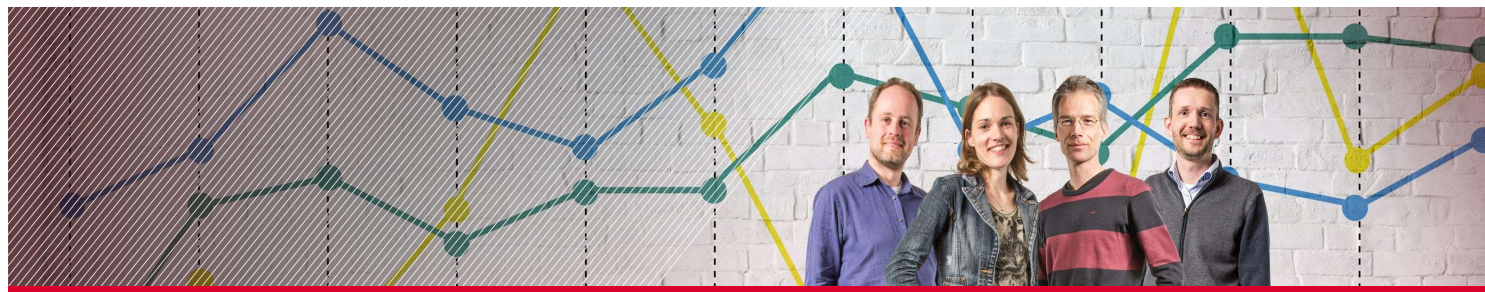

Attribution requirement : when using these data (for whatever purpose), please make the following reference:
